1)Create Flow in Flow Designer

The Borrow Request Approval Flow is implemented using ServiceNow Flow Designer to automate the book borrowing process. The flow is triggered whenever a new borrow request is created or an existing request is updated with the status Requested. An approval task is automatically sent to the librarian for review. If the request is approved, the system updates the Book record status to Issued, updates the Borrow Request status to Approved, and sends an email notification to the student confirming that the book has been issued. If the request is rejected, the borrow request status is updated accordingly, and the student is notified through email. This workflow eliminates manual intervention, improves efficiency, and ensures a smooth and transparent approval process.

The screenshot displays the 'Borrow Request Approval Flow' configuration in the 'TRIGGER' section. The trigger is set to 'Borrow Request Created or Updated where (Status is Requested)'. The trigger type is 'Created or Updated', and the table is 'Borrow Request [u_borrow_requ...'. The condition is 'All of these conditions must be met', with a single condition: 'Status is Requested'. The 'Run Trigger' is set to 'Once'. The interface includes 'Delete', 'Cancel', and 'Done' buttons at the bottom right.

The screenshot displays the 'Borrow Request Approval Flow' configuration in the 'Action Inputs' section. The 'Record' is 'Trigger - ... - Borrow Request...'. The 'Table' is 'Borrow Request [u_borrow_requ...'. The 'Approval Reason' is 'New book borrow request awaiting librarian approval'. The 'Approval Field' is 'Status'. The 'Journal Field' is 'Select a field'. The 'Rules' section includes two rule sets: 'Approve' and 'Reject'. The 'Approve' rule set has the condition 'Anyone approves' and the action 'Librarian Approvers X'. The 'Reject' rule set has the condition 'Anyone rejects' and the action 'Librarian Approvers X'. The 'Due Date' is set to 'Reject' and 'If pending by' is 'Actual date'. The interface includes 'Add another OR rule set', 'Remove rule set', and 'Drop date/time pill here' options.

Borrow Request Approval Flow Inactive

TRIGGER

- Borrow Request Created or Updated where (Status is Requested)

ACTIONS Select multiple

- 1 Ask For Approval on Borrow Request
- 2 Update Book Record
- 3 Update Borrow Request Record
- 4 Send Email

+ Add an Action, Flow Logic, or Subflow

ERROR HANDLER If an error occurs in your flow, the actions you add here will run.

2)Create UI Policy

A UI Policy named "Make Return Date Mandatory when Issued" is created on the Borrow Request table to ensure that the Return Date field is completed before a book is issued. The policy is active and is triggered when the Status of the borrow request is Approved. When this condition is met, the Return Date (u_return_date) field becomes mandatory and visible on the form. This ensures that every approved borrowing request includes a valid return date, helping the library manage due dates effectively, improve record accuracy, and prevent incomplete borrow request records. The UI Policy enhances the user experience by automatically enforcing this business rule without requiring manual validation.

servicenow UI Policy - Make Return Date mandatory when Issued.

UI policies change fields on a form based on a set of conditions. Use UI policies to show or hide fields, or to make fields mandatory or read-only based on these conditions. A UI policy specifies one or more actions to take when the policy is triggered. First, create the policy. Then add as many actions as necessary. UI policy actions are applied only if all of the following conditions are met:

- The UI Policy is **Active**
- The items in the **Conditions** field evaluate to true
- The field specified in the UI policy action is present on the specified form
